Final holdout: primal–dual results

Method / selection rule	L / K	U / K	(U − L) / K	Gap score	SD (seeds)
Ridge	0.151048	0.255374	0.104326	0.185268	0.096560
PCA + Ridge	0.151240	0.255374	0.104134	0.185036	0.096206
Gated Ridge	0.150340	0.255374	0.105034	0.186014	0.095974
MLP	0.141704	0.255374	0.113670	0.195599	0.092917
Ridge + MLP	0.150750	0.255374	0.104624	0.185697	0.095675
Threshold policy	0.058579	0.255374	0.196795	0.289598	0.073307
Policy iteration	0.151240	0.255374	0.104134	0.185036	0.096206
Original Context: best generated	0.149877	0.255374	0.105497	0.186558	0.095784
Original direct: best generated	0.150137	0.255374	0.105237	0.186371	0.095491
Original Context incumbent	0.150543	0.255374	0.104830	0.185904	0.095173
Original direct incumbent	0.150415	0.255374	0.104959	0.186041	0.096057
Structured-memory incumbent	0.151048	0.255374	0.104326	0.185268	0.096560
Score-only incumbent	0.150679	0.255374	0.104695	0.185653	0.095898

Three seed blocks; four test contracts per block. Means of normalized sample estimates.

Gap score includes Monte Carlo uncertainty and a tail term. SD is across seeds; selections froze before testing.
